Research Summary

Butene propylene copolymer, with the CAS number 29160-13-2, is a type of thermoplastic elastomer that is produced by copolymerizing butene and propylene monomers. It is commonly referred to as BPC or TPO (thermoplastic olefin). This copolymer combines the properties of both polybutene and polypropylene, resulting in a material with enhanced flexibility, impact resistance, and heat resistance. It exhibits good weatherability, chemical resistance, and dimensional stability, making it suitable for a variety of applications. Butene propylene copolymer is commonly used in the automotive industry for manufacturing interior and exterior parts, such as bumper fascia, instrument panels, door panels, and trim. It is also utilized in construction, electrical insulation, and various industrial applications where a combination of flexibility, durability, and processing ease is required. The specific properties and applications of butene propylene copolymer may vary depending on the formulation and processing techniques used.

The major global manufacturers of Butene Propylene Copolymer (CAS 29160-13-2) include Sinopec, LyondellBasell, MitsuiChemical, REXTac, etc. The global players competition landscape in this report is divided into three tiers.
