### Research Summary

A button badge machine, also known as a button maker or badge press, is a device used to create custom buttons or badges. It consists of a metal or plastic base with a circular opening and a lever mechanism. The process of making button badges involves several steps. First, a circular piece of artwork or design is printed or cut to fit the size of the button. The badge machine is then loaded with a metal shell, which consists of a front cover, a clear plastic sheet, and a back cover. The printed or cut design is placed on top of the metal shell, and a plastic film or mylar is added to protect the design. The lever of the button badge machine is then pressed down, exerting pressure on the components and securely fastening them together to create the final button badge. Button badge machines are popular for personal and promotional purposes, allowing individuals, businesses, and organizations to create custom badges for events, campaigns, marketing, or personal expression. They are commonly used in schools, political campaigns, fundraising events, and other occasions where a visually appealing and wearable item is desired.
