Research Summary

Butyl Methacrylate (BMA) is a chemical compound belonging to the class of methacrylates, which are esters of methacrylic acid. It is a clear, colorless liquid with a characteristic fruity odor. BMA is primarily used as a monomer in the production of polymers and copolymers, specifically in the manufacturing of acrylic resins and coatings. Its low volatility, high solvency, and good adhesion properties make it valuable in various applications, including automotive coatings, adhesives, inks, and textiles. BMA undergoes polymerization to form a solid material with desirable properties such as durability, resistance to chemicals and weathering, and excellent film-forming capabilities. It is important to handle BMA with caution due to its flammability and potential to cause skin and eye irritation, and appropriate safety measures should be followed during its use.

The major global manufacturers of Butyl Methacrylate include Mitsubishi Chemical Group, Mitsubishi Gas Chemical, LG MMA, Evonik Industries, KYOEISHA Chemical, Fushun Donglian Anxin Chemical, Dow Chemical, Shanghai HeChuang Chemical,
