### Research Summary

Butyllithium is a highly reactive and pyrophoric organometallic compound with the chemical formula (C<sub>4</sub>H<sub>9</sub>Li). It consists of a lithium atom bonded to four butyl (C<sub>4</sub>H<sub>9</sub>) groups. It is typically found as a colorless or yellowish liquid and is commonly used as a strong base and as a powerful nucleophile in organic synthesis. Butyllithium is highly reactive due to the polarity of the carbon-lithium bond, and it readily donates its butyl group to react with various organic compounds, such as alkyl halides and carbonyl compounds, to form new carbon-carbon bonds. It is essential in the synthesis of many complex organic molecules and is frequently utilized in the pharmaceutical, agrochemical, and polymer industries. Due to its reactivity and sensitivity to air and moisture, butyllithium must be handled with extreme care and under controlled conditions.

The major global manufacturers of Butyllithium include Livent, Albemarle, Jiangsu Changjili New Energy Technology, Jiangxi Ganfeng Lithium, Shaoxing Shangyu Hualun Chemical, etc. The global players competition landscape in this report is divided into

three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
