Research Summary

A cabin air filter, also known as an interior air filter or pollen filter, is a component found in modern vehicles that is responsible for filtering the air that enters the passenger compartment. It is typically located within the HVAC (Heating, Ventilation, and Air Conditioning) system of a vehicle, either behind the glove compartment or under the dashboard. The primary function of a cabin air filter is to remove dust, pollen, allergens, pollutants, and other airborne particles from the outside air before it enters the cabin. This helps improve the air quality inside the vehicle, reduces odors, and provides a cleaner and healthier environment for the occupants. Cabin air filters need periodic replacement according to the manufacturer's recommendations to maintain their effectiveness, as they can become clogged over time with the accumulated particles. Regular replacement ensures optimal filtration performance and helps maintain the overall comfort of the vehicle's interior.

The major global manufacturers of Cabin Air Filter include MANN+HUMMEL, JinWei, Bosch, MAHLE, Universe Filter, Freudenberg, YBM, Baowang, Phoenix, TOYOTA
