### Research Summary

Calcined alumina is derived from the mineral bauxite which is refined through a chemical process to obtain alumina. Calcined alumina is a white, odorless, and tasteless powder that is insoluble in water and alcohol. It is a high-purity form of aluminum oxide that has been thermally treated to remove any chemically combined water and impurities, resulting in a highly dense and hard material. Calcined alumina is widely used in the production of ceramics, refractories, abrasives, catalysts, and electrical insulators. It is also often used as a polishing agent, filler material, and flame retardant. Due to its high melting point, high hardness, and excellent chemical resistance, it is an ideal material for high-temperature applications and harsh environments.

The major global manufacturers of Calcined Alumina include Almatis, Alteo, Sumitomo Chemical, Showa Denko, CHALCO, Hindalco, Jingang, Nalco, Nabaltec, Motim, Nippon Light Metal, Huber, Silkem, Shandong Aopeng, ICA, Kaiou, etc. The global players competition landscape in this report is divided into three tiers.
