Research Summary

A calving sensor is a specialized device designed to monitor and detect signs of imminent calving in pregnant livestock, primarily cows. These sensors are typically attached to the animal or implanted to provide real-time data on physiological changes and behaviors that indicate the onset of labor. Common indicators monitored include body temperature, activity levels, and contractions. The sensor transmits this data to a central system or directly to the farmer's mobile device, allowing for timely intervention and assistance during the birthing process. Calving sensors enhance animal welfare by reducing the risk of complications during birth and improving overall farm management efficiency by ensuring that farmers can provide immediate care when needed.

The major global manufacturers of Calving Sensor include Allflex (MSD), smaXtec, Evolution XY, Moocall, Afimilk Ltd, MEDRIA, ALB Innovation, HerdInsights (Datamars), Copartner, etc. The global players competition landscape in this report is divided into three tiers.
