### Research Summary

Can seamers are specialized machines used in the food and beverage industry to create airtight seals on metal cans. They are designed to securely attach the lids or ends to the body of the can, ensuring the preservation and containment of the product inside. Can seamers typically consist of a rotating turret or platform that holds the cans in place, a set of seaming rolls or chucks, and a mechanical or pneumatic system for applying pressure to form the seal. The seaming rolls engage with the can and lid, gradually folding and crimping the metal together to create a hermetic seal. Can seamers can be configured for specific can sizes and types, such as beverage cans, food cans, or aerosol cans. They are used in large-scale production facilities, where high-speed and consistent sealing of cans is required. Can seamers play a critical role in maintaining the freshness, safety, and shelf life of canned products, ensuring that they are properly sealed and protected from external contaminants.

The major global manufacturers of Can Seamers include Ferrum Canning Technology, Pneumatic Scale Angelus, CFT Group, Kronos, Toyo Seikan, ZACMI, JBT, Ezquerra
