Research Summary

Caprylhydroxamic acid (CHA) is an organic compound with the chemical formula $C_8H_{17}NO_2$. It is a white to off-white powder that is soluble in water and various organic solvents. Caprylhydroxamic acid is derived from coconut oil and belongs to a class of compounds called hydroxamic acids. It is primarily used as a chelating agent and preservative in cosmetic and personal care products. CHA has antimicrobial properties, particularly against bacteria and fungi, making it effective in preventing the growth of microorganisms in formulations. It is commonly used in skincare products, haircare products, sunscreens, and other cosmetics as a natural alternative to traditional preservatives. Caprylhydroxamic acid is considered relatively safe for use in cosmetics, and its presence helps to maintain the stability and shelf-life of various beauty and personal care products.
