Research Summary

A car door latch is a mechanical component located on the edge of a vehicle's door that provides secure closure and locking functionality. It consists of various parts, including a latch mechanism, striker plate, and locking mechanism. When the door is closed, the latch mechanism engages with the striker plate, creating a secure connection that keeps the door shut. The locking mechanism, usually operated by a handle or a button, allows the door to be locked from the inside or outside, providing an additional layer of security. The car door latch ensures that the door remains closed while driving, protects occupants from accidental opening, and contributes to the overall safety and integrity of the vehicle's structure.
