Research Summary

Carbofuran is a highly toxic systemic insecticide and nematicide that belongs to the carbamate class of pesticides. It is primarily used in agricultural settings to control a wide range of pests, including insects, mites, and nematodes, in crops such as corn, rice, potatoes, and soybeans. Carbofuran works by inhibiting the activity of the enzyme acetylcholinesterase, leading to the accumulation of acetylcholine in the nervous system of pests, which ultimately results in their paralysis and death. However, carbofuran is highly toxic to humans and animals and poses significant risks to the environment. Due to its acute toxicity and potential for causing long-term adverse effects, its use has been banned or strictly regulated in many countries. Prolonged exposure or ingestion of carbofuran can lead to a range of health problems, including neurological disorders, respiratory issues, and even death. Strict safety measures and proper handling procedures are essential when dealing with carbofuran to minimize its environmental and health impacts.

The major global manufacturers of Carbofuran include FMC, Hunan Haili Chemical, Hunan Gofar Fine Chemical, Hubei Sanonda (Chemchina), LANFENG BIO-CHEM,

Jialong Chemical, etc. The global players competition landscape in this report is divided into three tiers.
