Research Summary

Carbomer is a commonly used ingredient in personal care products, such as skincare, haircare, and oral care products. It is a synthetic polymer that acts as a thickening agent, stabilizer, and emulsion enhancer. Carbomers are highly efficient at creating viscosity and providing a gel-like consistency to formulations, allowing for better spreadability and improved product texture. They are often used in creams, lotions, serums, and gels to give them a smooth and luxurious feel. Carbomers can also help in suspending and stabilizing other active ingredients, preventing their separation and ensuring even distribution throughout the product. Additionally, they can enhance the product's clinginess, ensuring that it adheres to the skin or hair for better performance and longer-lasting effects. Overall, carbomers are valuable additives in personal care products, contributing to their overall sensory experience and effectiveness.
