### Research Summary

Carbomer is a class of synthetic polymers widely used in the pharmaceutical, cosmetic, and personal care industries. These polymers are highly cross-linked acrylic acid polymers that are typically derived from acrylic acid monomers. Carbomers are known for their ability to form clear gels and provide thickening, stabilizing, and suspending properties to a variety of products. They are commonly utilized as viscosity modifiers, emulsion stabilizers, and controlled-release agents in creams, lotions, gels, and ointments. Carbomers can absorb and retain large amounts of water, which allows for the creation of stable and smooth formulations with desirable rheological properties. They also play a role in enhancing the spreadability and skin feel of cosmetic and pharmaceutical products. Additionally, carbomers are often used as a matrix in oral controlled-release drug delivery systems. Due to their versatility and compatibility with a wide range of active ingredients, carbomers have become a popular choice in formulating various consumer and healthcare products.

The major global manufacturers of Carbomer include Lubrizol, Tinci Materials, SNF Floerger, Newman Fine Chemical, Sumitomo Seika, Evonik, Corel, DX Chemical, Maruti
