Research Summary

Carbon black pigment is a type of pigment derived from carbon black, a form of amorphous carbon produced by the incomplete combustion of hydrocarbons. It is widely used in the coloration of various materials, including paints, inks, plastics, and coatings. Carbon black pigment is known for its deep black color and high tinting strength, which allows it to impart intense and rich black hues to the materials it is added to. It is a versatile pigment that provides excellent opacity, UV resistance, and lightfastness, making it suitable for both indoor and outdoor applications. Carbon black pigments are commonly used to achieve black shades and as a base for tinting other colors due to their ability to create darker and more saturated tones. They are also used as a performance additive, improving the durability and stability of the materials they are incorporated into.

The major global manufacturers of Carbon Black Pigment include Orion Engineered Carbons, Cabot, Birla Carbon, Mitsubishi Chemical, China Synthetic Rubber, Tokai Carbon, Phillips Carbon Black, Shandong Huibaichuan New Materials, Shanxi Fulihua
