Research Summary

A carbon block filter is a water filtration system that utilizes a carbon block as the primary filtering medium. The carbon block filter is designed to remove impurities and contaminants from water, providing clean and purified drinking water. The carbon block is made up of compressed activated carbon, which has a large surface area with numerous microscopic pores. As water flows through the carbon block, the activated carbon adsorbs and traps various substances, including chlorine, volatile organic compounds (VOCs), sediment, bad taste, odors, and some heavy metals. The carbon block filter effectively improves water quality by reducing these unwanted elements and improving taste and odor. It is commonly used in point-of-use water filtration systems, such as under-sink filters, countertop filters, and pitcher filters, as well as in point-of-entry whole-house filtration systems. Carbon block filters are popular due to their effectiveness, long-lasting filtration capability, and ability to remove a broad range of contaminants, providing a reliable and convenient solution for obtaining clean and better-tasting water.

The major global manufacturers of Carbon Block Filter include Brother Filtration, Carbon

Block Technology (CB Tech), Omnipure, AmeriWater, Atlas Filtri, SpectraPure, Pentair, Filson Filters, Pure Aqua, Apex Water Filters, Fil-Trek, Pureflo, Hongtek, Hatenoer, Germ Africa, etc. The global players competition landscape in this report is divided into three tiers.
