Research Summary

A carbon block refers to a solid block or cartridge composed of activated carbon, which is widely used for water filtration and purification purposes. It is a highly porous material derived from materials such as coal, coconut shells, or wood, processed to have an extensive internal surface area. The carbon block acts as a filter medium, effectively adsorbing and removing impurities, contaminants, and unwanted substances from water. It can effectively remove chlorine, volatile organic compounds (VOCs), sediment, bad taste, odor, and certain heavy metals. The porous structure of the carbon block allows for an increased contact time between water and the activated carbon, enhancing the filtration efficiency. Carbon blocks are commonly used in point-of-use and point-of-entry water filtration systems, including under-sink filters, whole-house filters, and countertop filters, providing clean and purified water for drinking, cooking, and other household purposes.

The major global manufacturers of Carbon Block include Marmon, Multipure, CB Tech, American Carbon Block, AXEON, Omnipure, Pentek, Aquafilter, Aquaphor, Coco Carbon, Altwell Tech, Handok Cleantec, 3AC, Siam Cast Nylon, Kemflo, BEATUS,
