Research Summary

A carbon dioxide (CO₂) gas sensor is a device designed to detect and measure the presence and concentration of carbon dioxide gas in the surrounding environment. It operates based on the principle of electrochemical, optical, or solid-state sensing technology. Electrochemical sensors utilize electrodes and an electrolyte to generate an electrical signal proportional to the CO₂ concentration. Optical sensors employ infrared radiation to measure the absorption of CO₂ molecules, while solid-state sensors utilize sensitive materials that change their electrical properties in response to CO₂. These sensors are commonly used in various applications such as indoor air quality monitoring, HVAC systems, industrial processes, and safety systems. They provide real-time measurements of CO₂ levels, enabling prompt detection of potential hazards, the optimization of ventilation systems, and the implementation of appropriate control measures to ensure the safety and comfort of occupants.
