Research Summary

Carbon offset/carbon credit trading services are mechanisms designed to help mitigate greenhouse gas emissions by promoting investments in projects that reduce or remove carbon dioxide from the atmosphere. The concept is based on the idea that certain activities generate carbon emissions, while others help offset or neutralize those emissions. Companies or individuals can purchase carbon credits or offsets from projects that have demonstrated emission reductions or removals, such as renewable energy projects, reforestation initiatives, or energy efficiency programs. These credits represent a quantified reduction or removal of greenhouse gas emissions. Carbon offset trading platforms facilitate the buying and selling of these credits, allowing entities with excess emissions to purchase offsets from those with surplus reductions. The goal is to create financial incentives for emission reduction efforts and support sustainable practices. Carbon offset/carbon credit trading services play a vital role in advancing climate change mitigation strategies by enabling organizations to take responsibility for their emissions and contribute to global efforts to combat climate change.
