Research Summary

Carboxylated SBR (Styrene-Butadiene Rubber) latex is a type of synthetic latex that is carboxylated, meaning it contains carboxyl functional groups (-COOH) incorporated into the polymer structure. SBR latex is produced by emulsion polymerization of styrene and butadiene monomers, resulting in a polymer dispersion in water. Carboxylation of SBR latex involves the introduction of carboxyl groups through chemical modification. The addition of carboxyl groups imparts a negative charge to the latex particles, leading to improved stability and enhanced properties. Carboxylated SBR latex finds application in various industries, including adhesives, coatings, and textiles. It is particularly valued for its excellent adhesion, high film strength, and good mechanical properties. The carboxyl groups present in the latex enable better interactions with other components and enhance compatibility with other polymers or surfaces. This makes carboxylated SBR latex an essential ingredient in formulations that require strong adhesion, flexibility, and durability.

The major global manufacturers of Carboxylated SBR Latex include Trinseo, BASF, LG Chem, Rizhao Jinhu Jinma Chemical, Zhuhai Jinji Chemical, Hangzhou Longju

Synthetic Material, Zibo Qixiangtengda Chemical, Zhejiang Hongyu Bio-Tech, Euclid Chemical, Asahi Kasei, etc. The global players competition landscape in this report is divided into three tiers.
