Research Summary

A cardiac pacemaker is a small electronic device that is implanted in the body to regulate and control abnormal heart rhythms. It consists of a pulse generator and one or more leads, which are thin, insulated wires. The pulse generator contains a battery and electronic circuitry that generates electrical impulses. The leads are threaded through blood vessels and positioned in the heart chambers. The pacemaker continuously monitors the heart's electrical activity and, when necessary, delivers electrical signals through the leads to stimulate the heart muscles and restore a normal heart rate. Pacemakers are used to treat conditions such as bradycardia (slow heart rate), heart block, and certain types of arrhythmias. They can be programmed to provide different pacing modes and adapt to the individual's needs. Cardiac pacemakers significantly improve the quality of life for individuals with abnormal heart rhythms by maintaining a regular heart rate and preventing symptoms associated with an irregular heartbeat.

The major global manufacturers of Cardiac Pacemaker include Medtronic, Abbott, Boston Scientific, BIOTRONIK, Sorin Group, IMZ, Medico, CCC, Pacetronix, Cardioelectronica, Neuroiz, Qinming Medical, etc. The global players competition
