Research Summary

Carminic acid is a natural red pigment derived from the cochineal insect (*Dactylopius coccus*). It is commonly used as a colorant in various industries, including food, cosmetics, and textiles. Carminic acid is extracted from female cochineal insects, which produce the acid as a defense mechanism against predators. The pigment has excellent stability and provides a vibrant red color, making it desirable for applications where a bright and stable red hue is required. In the food industry, carminic acid is used as a natural food coloring, particularly in products such as beverages, dairy products, confectionery, and processed meats. It is also utilized in cosmetics, such as lipsticks and blushes, to provide a rich red shade. Additionally, carminic acid can be used as a dye in textiles, producing vivid red hues in fabrics. Its natural origin and intense coloring properties make carminic acid a popular choice for achieving red tones in various consumer products.

The major global manufacturers of Carminic Acid include DDW COLOR, Holland Ingredients, COLORMAKER, International Flavors&Fragrances, Biocon Del Peru, Natcolor Peru, Proagrosur Per?, etc. The global players competition landscape in this
