Research Summary

Carob chocolate, often referred to as carob candy or carob treats, is a confectionery product made using carob powder as a substitute for traditional cocoa powder found in regular chocolate. Carob is derived from the pods of the carob tree (*Ceratonia siliqua*), a tree native to the Mediterranean region. Carob powder has a sweet and mild flavor reminiscent of chocolate but with its unique taste. Carob chocolate is often considered an alternative to traditional chocolate for individuals who are allergic to or avoiding cocoa or are seeking a caffeine-free and low-fat option. Carob chocolate can be found in various forms, including bars, chips, and coated treats, and is commonly used in baking or enjoyed as a standalone treat. It provides a rich and satisfying taste, along with potential health benefits as carob is a good source of dietary fiber and contains natural sugars. However, it is important to note that carob chocolate does not have the exact flavor and texture of cocoa-based chocolate, so taste preferences may vary.
