Research Summary

Carotenoids are a group of naturally occurring pigments found in plants, algae, and some microorganisms. They are responsible for the vibrant colors seen in fruits, vegetables, and flowers. Carotenoids play essential roles in photosynthesis, protecting plants from excessive light energy, and as antioxidants. These compounds are synthesized by plants and can be classified into two main groups: carotenes and xanthophylls. Carotenes, such as beta-carotene and lycopene, are typically red, orange, or yellow pigments, while xanthophylls, such as lutein and zeaxanthin, are yellow or yellow-orange pigments. Carotenoids have gained attention due to their potential health benefits. They act as powerful antioxidants, helping to neutralize harmful free radicals and protect cells from oxidative damage. Additionally, some carotenoids, such as beta-carotene, can be converted into vitamin A in the body, which is essential for vision, immune function, and overall health. Consuming a diverse range of fruits and vegetables rich in carotenoids is considered beneficial for supporting overall health and well-being.

The major global manufacturers of Carotenoid include DSM, BASF, Allied Biotech, Chenguang Biotech, FMC, Dohler, Chr. Hansen, Carotech, DDW, Anhui Wisdom, Excelvite, Tian Yin, Kemin, etc. The global players competition landscape in this report is divided into three tiers.
