### Research Summary

A cast film line, also known as a cast film extrusion line, is a manufacturing setup used to produce cast film. It is a complex system that includes multiple components and processes to create a continuous, thin plastic film. The cast film line typically consists of an extruder, which melts and pumps the polymer resin, a flat die, which shapes and distributes the molten resin into a uniform film, a chill roll, where the film solidifies and is cooled, and various other auxiliary equipment such as cooling systems, winders, and controls. During operation, the polymer resin is melted and extruded through the flat die, creating a thin, molten film that is immediately cooled and solidified by contact with the chill roll. The resulting film is then carefully wound onto rolls for storage, further processing, or distribution. Cast film lines are used to produce a wide range of plastic films with different properties, including packaging films, agricultural films, industrial films, and specialty films. They offer flexibility in terms of film thickness, width, and formulation, allowing manufacturers to tailor the film to specific application requirements. Cast film lines are vital in the plastics industry, enabling the efficient and consistent production of high-quality films for various end uses.

The major global manufacturers of Cast Film Line include Reifenhäuser, Windmoller & Holscher, SML Maschinengesellschaft, Colines, JSW, Musashino Kikai, Amut Dolci, Simcheng, FKI, Macro, JWELL, Sanxin, Sumitomo Heavy Industries Modern, Guangdong Jinming, Davis Standard, JP Extrusiontech, etc. The global players competition landscape in this report is divided into three tiers.
