Research Summary

Cast film, also known as cast stretch film or cast polyethylene film, is a type of plastic film produced through the cast extrusion process. It involves melting and extruding a polymer resin, typically polyethylene, onto a polished, cooled metal roll called a chill roll. The molten polymer spreads and forms a thin, continuous film as it solidifies against the chill roll's surface. The resulting cast film has excellent clarity, smoothness, and uniform thickness. Cast film is widely used for packaging applications due to its exceptional strength, stretchability, and puncture resistance. It offers superior load retention and protection, making it ideal for wrapping pallets and securing goods during storage and transportation. Cast film is known for its quiet unwinding characteristic, enabling efficient machine operation and reducing noise levels in industrial settings. It is available in various widths, thicknesses, and colors, providing versatility for different packaging needs. Cast film finds applications in industries such as food and beverage, logistics, agriculture, and manufacturing, where reliable and cost-effective packaging solutions are required.

The major global manufacturers of Cast Film include Profol Group, DDN, Zhejiang
