Research Summary

Cast polypropylene (CPP) film is a type of plastic film made from polypropylene resins through the cast extrusion process. It is a versatile and transparent film with excellent mechanical properties and heat resistance. CPP film is produced by melting the polypropylene resin and extruding it onto a chill roll where it solidifies and forms a thin, continuous film. The film is then carefully wound into rolls for further processing or packaging applications. CPP film offers a range of desirable characteristics, including high clarity, good tensile strength, and flexibility. It has excellent moisture barrier properties, making it suitable for food packaging and other applications where protection from moisture is required. CPP film can be heat-sealed, making it ideal for packaging applications that require secure and tamper-evident closures. It is commonly used in various industries, including food packaging, pharmaceuticals, textiles, and adhesive tapes. CPP film is highly versatile, allowing for customization in terms of thickness, width, and surface treatments to meet specific packaging requirements.

The major global manufacturers of Cast Polypropylene (CPP) Film include Polyplex
