### Research Summary

Cast resin transformers, also known as dry-type transformers, are electrical devices used for voltage transformation in power distribution systems. Unlike traditional oil-filled transformers, cast resin transformers utilize solid epoxy resin as the insulation and cooling medium instead of liquid oil. The core and windings of the transformer are encapsulated in the resin, providing excellent protection against moisture, dust, and contaminants. Cast resin transformers offer several advantages, including high mechanical strength, improved safety, reduced fire risk, and lower environmental impact due to the absence of oil. They are self-extinguishing, which means they do not propagate fires, making them suitable for indoor installations where fire safety is critical. Cast resin transformers are also more resistant to environmental factors such as temperature variations, humidity, and chemical substances. They are commonly used in commercial buildings, industrial facilities, renewable energy installations, and other applications where a reliable and efficient power supply is required. Their compact and lightweight design, along with low maintenance requirements, make them a preferred choice for various electrical power distribution systems.

The major global manufacturers of Cast Resin Transformers include ABB, Siemens, Schneider Electric, GE, JSHP Transformer, TBEA, Legrand, SGB-SMIT Group, TOSHIBA, Fuji Electric, Jinpan International, WEG, Efacec, Sunten Electric, Hyosung Heavy Industries, Jinshanmen, Imefy, Hitachi, Hammond Power Solutions, Voltamp Transformers, etc. The global players competition landscape in this report is divided into three tiers.
