Research Summary

Casters are small, wheeled devices typically attached to the bottom of furniture, equipment, or other objects to enable easy mobility and transportation. They consist of a mounting plate or bracket, a swivel or fixed wheel, and a mounting mechanism such as a stem, plate, or socket. Casters are available in various sizes, materials, and designs to suit different applications and load capacities. Swivel casters allow for multidirectional movement, while fixed casters provide straightforward linear motion. Some casters feature locking mechanisms to secure objects in place once they are positioned. Casters can be made from materials such as rubber, polyurethane, metal, or nylon, depending on the desired durability, load capacity, and floor protection requirements. They are commonly used in industries such as healthcare, hospitality, warehousing, manufacturing, and office settings.
