Research Summary

Catalase is an enzyme found in the cells of organisms, including plants, animals, and bacteria. It plays a crucial role in protecting cells from the harmful effects of reactive oxygen species, specifically hydrogen peroxide. Catalase catalyzes the breakdown of hydrogen peroxide into water and oxygen, thereby preventing the accumulation of this potentially toxic compound. The enzyme's name is derived from its ability to accelerate (catalyze) the decomposition (ase) of hydrogen peroxide. Catalase is known for its rapid reaction rate, making it one of the most efficient enzymes. It is widely distributed throughout various tissues and organs, contributing to the maintenance of cellular homeostasis and protection against oxidative stress. Catalase has numerous applications in biotechnology, research, and clinical diagnostics, and its deficiency in humans has been associated with certain genetic disorders.

The major global manufacturers of Catalase include DuPont, Novozymes, GenoFocus, Habio, Sunson, Jiangyin BSDZYME, Yutell Biochemical, Hunan Lerkam, Beijing Winovazyme Biotech, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command

a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
