Research Summary

A cathode block is a crucial component used in the production of aluminum through the Hall-Héroult process, which is the primary method for aluminum smelting. It serves as a conductive electrode and forms the bottom part of the electrolytic cell. Made from a mixture of carbonaceous materials, binders, and additives, the cathode block functions by providing a stable surface for the reduction of alumina into aluminum during the electrolysis process. Its composition and design allow for efficient electrical and thermal conductivity while withstanding the extreme conditions of the smelting process, making it an essential element in aluminum production.

The major global manufacturers of Cathode Block include Tokai COBEX, Carbone Savoie, SEC Carbon, Ukrainsky Grafit, ENERGOPROM GROUP, Elkem, Chalco, Wanji Holding Group Graphite Product, Guangxi Qiangqiang Carbon, Jiangsu Inter-China Group, etc. The global players competition landscape in this report is divided into three tiers.
