Research Summary

Cavitated BOPP (Biaxially Oriented Polypropylene) film refers to a type of plastic film that has been engineered with a specific cavitation process. Cavitation involves the creation of voids or air pockets within the film structure, resulting in a film with reduced density and improved flexibility while maintaining strength and durability. Cavitated BOPP films are known for their enhanced barrier properties, heat resistance, and excellent printability. The presence of voids allows for efficient ink adhesion, making it suitable for high-quality printing applications such as flexible packaging, labels, and wraps. The cavitated structure also contributes to improved machinability and sealability, making it a popular choice in packaging applications where seal integrity and overall performance are crucial. Cavitated BOPP films offer a balance between mechanical strength, optical properties, and cost-effectiveness, making them a versatile choice for a wide range of packaging and printing applications.

The major global manufacturers of Cavitated BOPP Film include Oben Group, Zhongshan Wing Ning, Taghleef, Gettel Group, Vibac, SIBUR, Jindal Poly, Treofan,
