Research Summary

A ceiling grid system, also known as a suspended ceiling or drop ceiling, is a framework of metal or plastic components used to create a suspended ceiling below the actual structural ceiling of a building. The grid system typically consists of main runners, cross tees, and hanger wires that are interconnected to form a grid pattern. Ceiling tiles or panels are then placed within the grid, creating a finished ceiling surface. Ceiling grid systems offer several advantages, including improved acoustics, easy access to utilities and mechanical systems above the ceiling, enhanced aesthetics, and the ability to hide unsightly wires, pipes, or ductwork. They are commonly used in commercial, industrial, and residential buildings, such as offices, schools, hospitals, and retail spaces, where functionality, flexibility, and design considerations are important. The grid system allows for easy installation, maintenance, and customization, making it a popular choice for creating functional and visually appealing ceiling designs.

The major global manufacturers of Ceiling Grid System include Knauf (Germany), Rockfon (U.S.), Armstrong (USA), Saint-Gobain (France), DAIKEN Corporation (Japan),
