Research Summary

A ceiling-mounted presence detector is a sensor device installed on ceilings to detect human presence or motion in a designated area and automatically control lighting, HVAC systems, or security functions. These detectors use technologies such as passive infrared (PIR), ultrasonic, or microwave sensors to detect heat signatures or movement, triggering the connected systems accordingly. Ceiling-mounted presence detectors are commonly used in commercial buildings, offices, and smart homes to improve energy efficiency by ensuring that lights and other systems operate only when needed. Their wide coverage area and high sensitivity make them ideal for monitoring large spaces, enhancing convenience, security, and energy savings.
