Research Summary

Cell culture dishes, also known as culture plates or petri dishes, are flat, round or square containers used for growing and maintaining cells in a laboratory setting. They are typically made of clear, sterile plastic material, such as polystyrene, which is transparent and biocompatible. Cell culture dishes come in various sizes, ranging from a few centimeters to several inches in diameter, to accommodate different cell culture volumes and experimental needs. They feature a flat bottom and a rimmed edge to prevent spillage and allow for easy handling. The inner surface of the dish is usually treated with various coatings or treated to enhance cell attachment, spreading, and growth. Culture medium containing nutrients and growth factors is added to the dish, providing the necessary environment for cells to proliferate and adhere to the surface. Cell culture dishes are a fundamental tool in cell biology research, enabling scientists to study cell behavior, perform experiments, and observe cellular processes under controlled conditions.

The major global manufacturers of Cell Culture Dishes include Corning, Thermo Fisher

Scientific, Greiner Bio-One, Sarstedt, Sumitomo Bakelite, TPP Techno Plastic Products, VWR, Wuxi NEST Biotechnology, Crystalgen, CELLTREAT Scientific Products, etc. The global players competition landscape in this report is divided into three tiers.
