Research Summary

Cell freezing medium is a specialized solution used in biological and biomedical research to preserve cells for long-term storage at ultra-low temperatures, typically around -80°C or in liquid nitrogen (-196°C). It contains cryoprotectants like dimethyl sulfoxide (DMSO) or glycerol, which protect cells from damage caused by ice crystal formation during the freezing process. These cryoprotectants penetrate cell membranes to maintain cell integrity and prevent cellular damage. Additionally, cell freezing medium includes buffering agents to maintain pH and osmotic balance, as well as proteins like serum or albumin to provide essential nutrients and support cell survival. Antibiotics or antimycotics may also be added to prevent contamination. Cell freezing medium ensures that cells retain viability and functionality over extended storage periods, crucial for applications such as cell banking, biobanking, and regenerative medicine research.

The major global manufacturers of Cell Freezing Medium include Selcell, Yocon Biology Technology Company, Thermo Fisher Scientific, BioLife Solutions, Cytiva, Zenoaq, Merck, Sartorius, WAK-Chemie Medical, Meilunbio, SANAN OPTOELECTRONICS
