Research Summary

Cell Preparation Tubes (CPT) are specialized blood collection tubes designed to simplify the isolation and preparation of mononuclear cells, such as lymphocytes and monocytes, from whole blood. These tubes contain a density gradient separation medium and an anticoagulant, typically aiding in the collection and separation process directly within the tube. CPTs are widely used in clinical and research settings for applications like immune profiling, cell culture, and diagnostic assays. By streamlining the process of isolating peripheral blood mononuclear cells (PBMCs), they reduce the need for additional centrifugation steps, ensuring efficiency, consistency, and sample integrity during cell preparation.

The major global manufacturers of Cell Preparation Tubes (CPT) include BD Biosciences, Beijing Hanbaihan Medical Devices, Lingen Precision Medical Products, Longtime Biological, Xinle Medical, etc. The global players competition landscape in this report is divided into three tiers.
