Research Summary

Cell roller bottles are specialized laboratory containers designed for the large-scale cultivation and expansion of adherent cells. They are typically cylindrical in shape and made of plastic, featuring a round or oval bottom surface and a cap or closure system. The interior surface of the bottle is coated with a cell-adhesive material, such as collagen or extracellular matrix proteins, to facilitate cell attachment and growth. During cell culture, the bottles are placed on a roller apparatus that gently rotates them, allowing for the continuous and gentle mixing of cells and culture medium. This rolling motion promotes even distribution of nutrients and oxygen to the cells, prevents the formation of gradients, and mimics the fluid dynamics of cell growth in a bioreactor. Cell roller bottles are commonly used in applications such as the production of vaccines, monoclonal antibodies, and other therapeutic proteins, as well as in stem cell culture and tissue engineering, where large quantities of cells need to be grown in a controlled and scalable manner.

The major global manufacturers of Cell Roller Bottles include Corning, Thermo Fisher

Scientific, DWK Life Sciences, Greiner Bio-One, VWR, CELLTREAT Scientific, Abdos Labtech, SPL Life Sciences, Zhejiang Sorfa Life Science, Jet Bio-Filtration, etc. The global players competition landscape in this report is divided into three tiers.
