### Research Summary

A cell sorter is a specialized laboratory instrument used to separate and isolate specific types of cells from a heterogeneous cell population based on their physical or biochemical properties. Cell sorters are commonly used in biological and biomedical research, as well as in clinical applications. The sorting process typically involves passing a cell suspension through a flow cytometer, which analyzes individual cells based on parameters such as size, shape, and fluorescence. Cells that meet pre-defined criteria are then selectively sorted into separate containers using various methods, such as electrostatic deflection, acoustic waves, or microfluidics. Cell sorters are essential tools for studying cell populations, isolating rare cell types, purifying cells for downstream analysis or culture, and performing cell-based assays. They enable researchers to investigate cellular heterogeneity, characterize cell subpopulations, and explore cell function and behavior in health and disease.

The major global manufacturers of Cell Sorter include BD, Beckman Coulter, Cytonome, Miltenyi Biotec GmbH, Thermofisher, Bio-Rad Laboratories, Cytex, Sony Biotechnology, Union Biometrica, NanoCollect, etc. The global players competition landscape in this

report is divided into three tiers.
