Research Summary

Cellulose acetate is a derivative of cellulose, a natural polymer found in the cell walls of plants. Cellulose acetate is produced by chemically modifying cellulose through acetylation, which involves introducing acetyl groups onto the cellulose molecule. The degree of acetylation can vary, resulting in different types of cellulose acetate with varying properties. Cellulose acetate is commonly used in various industrial and commercial applications due to its desirable properties, including being biodegradable, transparent, and having good mechanical strength. One of its significant uses is in the production of cellulose acetate fibers, which are widely used in clothing, upholstery, and textiles. Cellulose acetate is also utilized in the manufacturing of plastics, films, eyewear frames, and as a binder in pharmaceutical and cosmetic products. Additionally, it has applications in photography, as it was historically used for photographic film and as a base material for magnetic tapes. Its versatility and eco-friendly nature make cellulose acetate a valuable material in a wide range of industries.

The major global manufacturers of Cellulose Acetate (CA) include Celanese, Eastman,

Daicel, Sichuan Push Acetati, Acetek Material, etc. The global players competition landscape in this report is divided into three tiers.
