Research Summary

The Center High-mounted Stop Light (CHMSL) is a safety feature on motor vehicles that is positioned at the center of the rear of the vehicle, usually at the top or near the rear window. It is an additional brake light that provides increased visibility to the vehicle's braking intentions, especially to drivers following behind. The CHMSL is typically mounted higher than the traditional brake lights on the vehicle's tail lights, making it more noticeable to other drivers. It is especially useful in situations where the vehicle's regular brake lights may be partially or completely obscured, such as when the vehicle is heavily loaded or when driving in adverse weather conditions. The CHMSL is designed to improve road safety by alerting drivers behind the vehicle of its braking actions, reducing the risk of rear-end collisions, and providing clearer communication on the road.
