Research Summary

A Central Tire Inflation System (CTIS) is a specialized technology used in vehicles, particularly off-road or military vehicles, to adjust and regulate the tire pressure of all the tires simultaneously from a central control unit. CTIS allows the driver to inflate or deflate the tires according to specific terrain conditions, providing optimal traction, stability, and control. By adjusting the tire pressure, CTIS can improve vehicle performance on different surfaces such as sand, mud, rocks, or pavement. The system typically includes sensors, valves, air lines, and a control unit that monitors and adjusts tire pressure as needed. CTIS offers several benefits, including increased mobility, better fuel efficiency, reduced tire wear, and improved handling and ride comfort. It is particularly useful in off-road vehicles, military vehicles, and heavy-duty trucks operating in challenging and diverse terrains.

The major global manufacturers of Central Tire Inflation System include Dana, Sygeon, Telefow, Mercedes-Benz, URAL, CM, STEMCO, AIR CTI, FTL Technology, VIGIA, etc. The global players competition landscape in this report is divided into three tiers. The
