Research Summary

Centrifugal compressors are mechanical devices used to increase the pressure and flow of gases in various industrial processes. They operate based on the principle of centrifugal force, where a rotating impeller accelerates the gas towards the outer edges of the compressor housing. The impeller consists of curved blades that draw in the gas and impart kinetic energy to it. As the gas moves through the compressor, its velocity is converted into pressure energy by the diffuser section, which slows down the gas and increases its pressure. Centrifugal compressors are widely used in applications that require high-volume, continuous gas compression, such as air compression, gas pipelines, refrigeration systems, and oil and gas processing. They offer advantages such as compact design, low maintenance requirements, and high efficiency. Centrifugal compressors can handle a wide range of gas types and flow rates, making them versatile and reliable components in various industries.

The major global manufacturers of Centrifugal Compressors include Atlas Copco, Elliott, Ingersoll Rand, Siemens Energy, GE Oil & Gas, MAN Diesel & Turbo, Gardner Denver,

Kobelco, MHI, Hitachi, Hanwha Techwin, Kawasaki, IHI, Fusheng, Sullair, etc. The global players competition landscape in this report is divided into three tiers.
