### Research Summary

A ceramic-coated separator is a specialized component used in certain types of batteries, such as lithium-ion batteries. It is a separator that is coated with a thin layer of ceramic material, typically ceramic oxide, on one or both sides. The separator is a critical part of a battery that acts as a barrier between the positive and negative electrodes, preventing short circuits and enhancing safety. The ceramic coating on the separator provides several benefits. It improves the thermal stability of the separator, making it more resistant to high temperatures and reducing the risk of thermal runaway in the battery. The ceramic coating also enhances the mechanical strength and puncture resistance of the separator, reducing the potential for internal short circuits. Additionally, the ceramic coating can improve the electrolyte wettability of the separator, facilitating better ion transport and enhancing battery performance. Ceramic-coated separators are commonly used in high-performance batteries, electric vehicles, and energy storage systems to improve safety, reliability, and overall battery performance.

The major global manufacturers of Ceramic Coated Separator include AsahiKasei
