Research Summary

Ceramic foam is a lightweight and porous material made from ceramic fibers or powders. It is characterized by its open-cell structure, which gives it a high porosity and large surface area. Ceramic foam is created through a process that involves mixing ceramic powders with a foaming agent, shaping the mixture into the desired form, and then firing it at high temperatures to achieve sintering and solidification. The resulting foam structure consists of interconnected ceramic struts or fibers that provide both mechanical support and thermal insulation properties. Ceramic foam is known for its excellent thermal stability, heat resistance, and sound absorption capabilities. It finds applications in various industries, including aerospace, automotive, thermal management, filtration, and catalyst support. Ceramic foam can be used as insulation in high-temperature environments, as a filter medium for liquid or gas filtration, or as a substrate for catalytic reactions. Its unique structure and properties make ceramic foam a versatile material with numerous industrial applications.

The major global manufacturers of Ceramic Foam include Selee, Foseco, Pyrotek,

Drache, LANIK, Ultramet, Galaxy, ERG Aerospace, Ferro-Term, FCRI Group, Shandong Shengquan, Jincheng Fuji, Baoding Ningxin, Guizhou New Material, Central Sourcing, Pingxiang Yingchao, Pingxiang Hualian, etc. The global players competition landscape in this report is divided into three tiers.
