Research Summary

Ceramic sleeves, also known as ceramic tubes or ceramic bushings, are cylindrical components made from ceramic materials that are used in various applications for their high-temperature resistance and electrical insulation properties. They are typically used to protect wires, cables, or other components from mechanical stress, abrasion, and thermal damage. Ceramic sleeves are known for their excellent thermal conductivity, chemical stability, and electrical insulation properties. They provide a protective barrier and support for sensitive components in environments where high temperatures, corrosive chemicals, or electrical insulation are critical. Ceramic sleeves are commonly used in industries such as electrical engineering, electronics, aerospace, and automotive. They ensure the safe and reliable operation of electrical systems, connectors, and cables, particularly in high-temperature or high-voltage applications.
