Research Summary

A cetane improver, also known as a cetane booster or diesel fuel additive, is a chemical compound used to enhance the cetane number of diesel fuel. The cetane number is a measure of the ignition quality of diesel fuel, indicating how easily it ignites and combusts in a diesel engine. A higher cetane number results in more efficient and smoother combustion, leading to improved engine performance, reduced emissions, and better fuel efficiency. Cetane improvers are typically added to diesel fuel to increase its cetane number, especially in regions where the quality of diesel fuel may be lower than desired. These additives work by promoting faster ignition and combustion, allowing the fuel to burn more completely and efficiently. Cetane improvers are commonly used in transportation, agriculture, and industrial sectors to optimize diesel engine performance, reduce engine noise, and meet regulatory emission standards.

The major global manufacturers of Cetane Improver include Eurenco, Wonder Energy Chemical, Afton Chemical, EPC-UK, BASF, Lubrizol Corporation, Chevron Oronite, Cestoil Chemical, Dorf Ketal, Biysk Oleum, Baker Hughes, Maxam, Innospec, Total
