### Research Summary

CFRP (Carbon Fiber Reinforced Polymer) recycle refers to the process of collecting, recovering, and reusing carbon fiber materials from end-of-life or waste products containing CFRP composites. CFRP is a lightweight and strong material commonly used in various industries, including aerospace, automotive, and sports equipment. However, when CFRP products reach the end of their useful life or become damaged, recycling becomes essential to reduce waste and conserve valuable resources. CFRP recycling involves several techniques, including mechanical processes to separate carbon fibers from resin matrix, pyrolysis to break down the composite into its constituents, and chemical methods to extract and purify the carbon fibers for reuse in new products. Recycling CFRP not only reduces environmental impact but also contributes to the sustainability and circular economy of the materials used in modern industries.

The major global suppliers of CFRP Recycle include Carbon Conversions, ELG Carbon Fibre, Karborek, Mitsubishi (CFK Valley Recycling), JCMA, Carbon Fiber

Remanufacturing, Adherent Tech, CRTTC, Hadeq Recycling, Procotex, SGL Carbon, CFRI, Sigmalex, Carbon Fiber Recycling, etc. The global players competition landscape in this report is divided into three tiers.
