Research Summary

A chemical catalyst is a substance that accelerates a chemical reaction by providing an alternative pathway with lower activation energy, thereby increasing the reaction rate without being consumed or permanently altered in the process. Catalysts work by interacting with the reactants to lower the energy barrier required for the reaction to occur, facilitating the formation of products. They play a crucial role in various industrial processes, such as petrochemical production, pharmaceutical synthesis, and environmental remediation, where they enable the efficient and selective transformation of reactants into desired products. Catalysts are essential in modern chemistry and technology as they enhance reaction efficiency, reduce energy consumption, and enable the synthesis of valuable products that might be challenging or impossible to achieve under typical reaction conditions.

The major global manufacturers of Chemical Catalyst include BASF SE, Johnson Matthey, Clariant AG, Honeywell International, Grace, Evonik Industries, CRI, Sinopec, Lyondell Basell Industries, Ineos Group AG, Albemarle Corporation, JGC Catalysts and
