Research Summary

Chicory flour is a type of flour made from the dried and ground roots of the chicory plant (*Cichorium intybus*). The roots of chicory are first roasted to enhance their flavor and reduce bitterness, and then they are finely ground to produce a powder-like flour. Chicory flour is often used as a coffee additive or substitute, particularly in regions where coffee beans may be scarce or expensive. When mixed with coffee, chicory flour imparts a rich, slightly nutty flavor and adds depth to the beverage. Apart from its use in coffee, chicory flour is also incorporated into various culinary applications, including baking. It can be used as an ingredient in bread, cakes, and other baked goods, adding a distinct flavor and contributing to the texture of the final product. Additionally, chicory flour contains inulin, a type of dietary fiber known for its potential health benefits, making it a nutritious and flavorful alternative to traditional flours.
