Research Summary

A chilled water storage system is a method of thermal energy storage used in commercial and industrial buildings to optimize energy usage in cooling systems. The system stores chilled water produced during off-peak periods, typically at night when electricity demand is low, in insulated tanks or reservoirs. During peak demand periods, such as hot afternoons, the stored chilled water is then used to meet cooling requirements, reducing the load on the chiller plant and minimizing energy consumption during peak electricity rates. Chilled water storage systems offer several benefits, including increased energy efficiency, reduced electricity costs, and improved cooling capacity. By storing chilled water when energy costs are lower and utilizing it during peak demand, the system helps to balance energy use, reduce strain on the power grid, and contribute to more sustainable and cost-effective cooling solutions in buildings.

The major global manufacturers of Chilled Water Storage System include DN Tanks, Preload, Taikisha, McDermott, Guangdong Tengyuan, Araner, Guangdong Yishun, LIME, Guangshun Electromechanical, Pacific Tank, API Energy, MMI, etc. The global
